Dear Sir/Madam,

MARCH QUARTER ACTIVITIES AND CASHFLOW REPORT

We attach the above announcement.

Yours faithfully

Ralph De Lacey
Managing Director

ABOUT CONSOLIDATED TIN MINES LIMITED

Consolidated Tin Mines Limited (CSD) is a junior exploration company with a current focus on Tin at Mt Garnet in the lower Herberton tin field in North Queensland.

Short to medium term goals are:

- Further define resources at Gillian and Pinnacles Projects while expanding and defining resources at Windermere Project
- Develop a hard rock mining operation
- Develop an alluvial mining operation
- Explore other known mineralisation within current tenement holding to provide resource expansion

MARCH QUARTER HIGHLIGHTS

- Major JORC Resource upgrade at Gillian Project
- Measured Resource increased to 1.2Mt @ 0.82% Tin; represents a 478,300t increase on the previous Measured Resource
- The new Indicated Resource is 824,100t @ 0.73% Tin; represents a significant increase.
- Gillian Resource Model developed
- Metallurgy testwork continued at Gillian Project
- Environmental monitoring continued at Upper Battle Creek and Gillian Projects
- Heads of Agreement signed with North Queensland Metals Limited

MAJOR JORC UPGRADE AT GILLIAN PROJECT- MT GARNET

Consolidated Tin Mines Ltd (ASX: CSD) announced a major JORC Resource upgrade at the Company's Gillian Tin Project in northern Queensland during the Quarter.

The JORC Measured Resource at the Gillian Project has increased to 1.2 million tonnes @ 0.82% Tin (Sn) from the previous Measured Resource of 724,700 tonnes @ 0.8% Tin. The new JORC Indicated Resource is 824,100 tonnes @ 0.73% Tin (Sn). This represents a significant increase in confidence in the project.

The Gillian Project is part of Consolidated Tin's wider Mt Garnet Project area, which is located 200km south west of Cairns in the lower Herberton Tin Field, one of Australia's premier tin fields (See Figure 1, attached, for Projects Location Map). The Company has drilled a total of 6,300 metres across 137 holes at the Mt Garnet Project and the project currently has a **total JORC Resource of 5.2Mt @ 0.64% Sn, 5.2Mt @ 26.45 Fe & 0.96Mt @15.25% F .**

The mineralisation is open ended with geophysics interpretations indicating extensions of strike at both ends. There is also potential for extensions at depth.

Table 1: Current JORC Resource at Mt Garnet Tin Project

TIN (Sn)	Measured tonnes	Grade %	Indicated tonnes	Grade %	Inferred tonnes	Grade %	Total tonnes	Grade %
Gillian	1,203,000	0.82	824,100	0.73	974,100	0.83	3,001,200	0.80
Pinnacles - Wafer	-	-	218,200	0.49	1,133,100	0.39	1,351,300	0.41

SUMMARY OF DRILLING INTERCEPTS AT GILLIAN PROJECT- MT GARNET

Drilling programs at the Gillian Project to date have produced 25 intersections of over 10 metres with average grade better than 0.55%Sn.

The near surface mineralisation of Gillian is now well understood with sufficient drilling to allow the company to develop a 3D Model of the outcropping section.

The mineralisation is open at both ends and at depth in some areas. Stand out intersections of **13 metres @ 2.02% Sn** and **36 metres @ 1.2% Sn** are very encouraging (see table 2).

The company is also becoming more aware of the value of the iron Resource which will be generated as a by-product at no additional mining or milling cost.

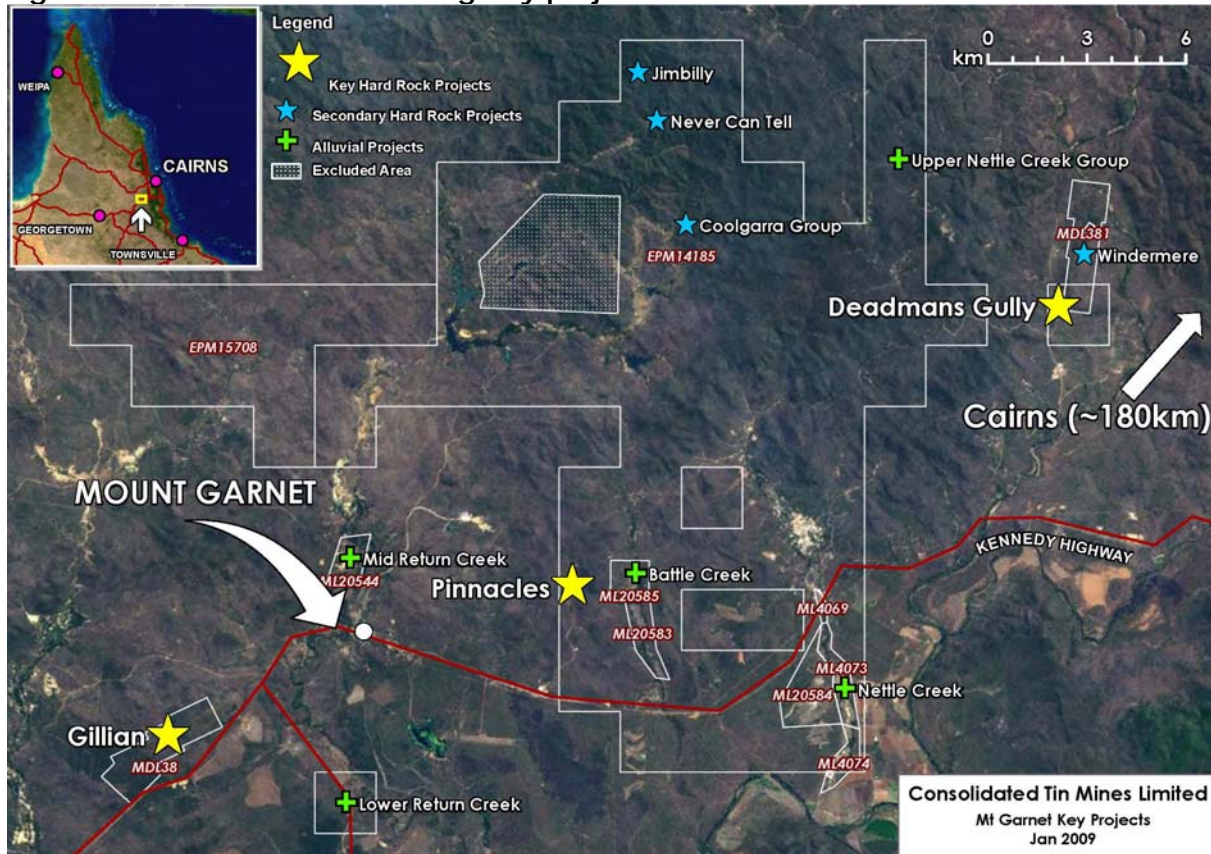

Table 2: Gillian Tin intersections in excess of 10 metres

<i>Hole No</i>	<i>Downhole Intercept</i>	<i>Length and Grade</i>
Hole 1	35-45 metres	10 metres @ 0.82% Sn, 38.3% Fe
Hole 4	14-27 metres	13 metres @ 2.02% Sn, 44.8% Fe
Hole 5	49-69 metres	20 metres @ 0.55% Sn, 25.3% Fe
Hole 7	14-35 metre	21 metres @ 1.14% Sn, 32.7% Fe
Hole 27	0-15 metres 45-58 metres	15 metres @ 1.31% Sn, 43.1% Fe 13 metres @ 0.59% Sn, 29.9% Fe
Hole 32	18-79 metres	61 metres @ 0.75% Sn, 31.0% Fe
Hole 77	60-70 metres	10 metres @ 0.6% Sn, 34.6% Fe
Hole 82	14-37 metres	23 metres @ 0.71% Sn, 41.8% Fe
Hole 83	16-43 metres	27 metres @ 1.1% Sn, 48.7% Fe
Hole 84	30-57 metres	27 metres @ 1.09% Sn, 43.7% Fe
Hole 93	20-30 metres	10 metres @ 0.88% Sn, 49.6% Fe
Hole 94	4-47 metres	43 metres @ 0.71% Sn, 34.3% Fe
Hole 95	34-70 metres	36 metres @ 1.2% Sn, 43.5% Fe
Hole 96	53-66 metres	13 metres @ 0.9% Sn, 31.7% Fe
Hole 104	8-18 metres	10 metres @ 0.81% Sn, 36.3% Fe
Hole 108	18-35 metres	17 metres @ 0.73% Sn, 38.9% Fe
Hole 109	17-28 metres	11 metres @ 0.74% Sn, 48.8% Fe
Hole 111	34-72 metres	38 metres @ 0.62% Sn, 31.8% Fe
Hole 113	6-37 metres	31 metres @ 0.62% Sn, 27.6 % Fe
Hole 127	72-95 metres	23 metres @ 1.01% Sn, 30.76% Fe
Hole 128	16-27 metres	11 metres @ 0.74% Sn, 26.9% Fe
Hole 129	9-33 metres	24 metres @ 1.45% Sn, 36.1% Fe
Hole 135	29-44 metres	15 metres @ 1.02% Sn, 39.6% Fe
Hole 136	48-68 metres	20 metres @ 0.84% Sn, 29.9% Fe

Stand out intersections :-

<i>Hole No</i>	<i>Length and Tin Grade</i>
Hole 4	13 metres @ 2.02% Sn
Hole 7	21 metres @ 1.14% Sn
Hole 27	15 metres @ 1.31% Sn
Hole 32	61 metres @ 0.74% Sn
Hole 94	43 metres @ 0.71% Sn
Hole 95	36 metres @ 1.2% Sn
Hole 111	38 metres @ 0.62% Sn
Hole 129	24 metres at 1.45% Sn (including 11 metres at 2.15% Sn - 1 Metre at 6.29% Sn)

Figure 1: Mt Garnet area showing key project locations

METALLURGY TESTWORK

The company is continuing with metallurgy testwork programs with encouraging results.

Several programs were undertaken during the quarter at AMMTEC Perth, Burnie Research Laboratories in Tasmania and Downer EDI at Carrara in Queensland, under the supervision of CSD Senior Metallurgist Robert Shelly. Results from these programs are continuing to be received and reviewed.

Considerable effort is being placed on establishing appropriate grind size to liberate the fine cassiterite and then to separate this cassiterite from the ironstone skarn material. Final flow sheet parameters are now being established and will be released early in the next quarter. The company is currently undertaking a larger sample through the now established flow circuit to establish definitive recoveries and grade.

A summary of all work done to date and a Scoping Study are now subject to (separate) an independent review and will be released in the very near future.

ENVIRONMENTAL MONITORING

Baseline environmental monitoring within the Battle Creek and Gillian project areas continued during the quarter. North Queensland based environmental consultants; Landline Consultants Pty Ltd continued to develop appropriate environmental management plans.

Baseline environment studies are a requirement for the permitting of Level 1 mining activities within Queensland.

CORPORATE

Heads of Agreement entered into with North Queensland Metals Limited

Consolidated Tin Mines Ltd announced on 16th March 2010 that it had signed a Heads of Agreement (HoA) with North Queensland Metals Limited (ASX: NQM) to acquire NQM's tin assets in the Herberton Tin Field in North Queensland.

The acquisition will consolidate Consolidated Tin's position as the pre-eminent tin Company in the historic Herberton Tin Field, and increases the Company's holding of tin assets in the region by 26% (6,058 km²).

Under the terms of the agreement the two parties have a 90-day exclusivity period (from 16th March) to conclude a formal agreement to effect the consolidation.

On completion of the formal agreement and the acquisition of NQM's tin assets, NQM will receive 25 million Consolidated Tin shares, \$500,000 cash and a royalty of 2.0% based on mineral production generated by Consolidated Tin from all NQM tenements acquired by Consolidated Tin (and EPM14016 and EPM16231).

The agreement is conditional upon the following:

- (a) Shareholder, ASIC and ASX approval requirements of NQM and CSD to be obtained by the end of the Exclusivity Period;
- (b) board approval of NQM and CSD to be obtained by the end of the Exclusivity Period;
- (c) NQM receiving notice under the Mining Act of the Minister's indicative approval to the transfer of the Sale Tenements to CSD;
- (d) CSD demonstrating to the mutual reasonable satisfaction of CSD and NQM by the end of the Exclusivity Period that CSD has the financial capacity to fund exploration and development goals in relation to the Sale Tenements;
- (e) if additional shareholder or other approvals are required as a result of any share issue required to satisfy the condition precedent in (d), including approval under Listing Rule 7.1 and section 611 item 7 Corporations Act (if necessary), those approvals must be obtained by CSD by the end of the Exclusivity Period;
- (f) NQM's and CSD satisfactory due diligence review to be completed within 35 days after the date of signing the HoA; and
- (g) between the date of signing the HoA and the date of Completion, there is no occurrence of a Prescribed Occurrence or a Material Adverse Change.

NQM will also become a cornerstone shareholder in Consolidated Tin, and will have the right to board representation.

The two companies have adjoining tenements covering the Herberton Tin Field near Cairns in North Queensland, and combined will form a dominant position which offers synergies and boosts the prospects of early production of tin concentrates.

UPCOMING ACTIVITIES

1. Drilling program at Windermere Tin Project - when permit granted
2. Continuing Metallurgy development
3. Scoping Study completed
4. Continue to progress development of environmental management plans

4.1. Security Holders

Total number of shares on issue at the end of the March quarter was 52,524,001 (with all quoted). Total options on issue were 44,075,000 (with all quoted). The company's top 5 shareholders are listed in Table below

Consolidated Tin Mines Limited top 5 shareholders

Shareholder	% of issued capital
Ralph De Lacey ATF	18.89
John Sainsbury Consulting Pty Ltd	14.90
ANZ Nom Ltd	7.82
Robert + Marina Roget	4.22
Smiling Sun Pty Ltd	2.75

4.2. Cash Reserves

The Company has approximately \$ 0.621million in cash reserves at the end of the March quarter.

The company in conjunction with the NQM transaction is reviewing its near term capital raising options and has commenced discussions with a number of parties with a view to entering into a capital raising mandate agreement.

The information contained in this report that relates to assay results of rock samples and drill chips, to mineral resource estimates and to ore reserve estimates of mineralisation has been compiled by John Sainsbury (BSc, AusIMM). John Sainsbury is a geologist of 30 years experience and has sufficient experience in the type of mineralisation under consideration to be a Competent Person as defined by the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves - JORC Code, 2004 Edition. John Sainsbury is an executive director of Consolidated Tin Mines Limited. John Sainsbury has consented to the inclusion of this information in the form and context in which it appears.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities.** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Cash Flow Statements* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
